

MASEL®

200 Series Instruments

with Advanced Corrosion Resistance

Unequaled durability. Specially formulated molybdenum tip inserts give MASEL®'s 200 Series Pliers superior strength and make them corrosion resistant ... cutting edges, serrations, and grooves are built to last.

Unparalleled engineering. Solid stainless steel forgings and box-joint construction ensure flawless operation.

Uncompromising quality. CE and ISO certified, each instrument is inspected for perfection through every step of manufacturing.

Brushed satin finish.

200 SERIES INSTRUMENTS

CUTTERS

Safety Hold Distal End Cutter

Cuts hard round, rectangular, annealed, and braided wire. Holds loose wire end, protecting patient, practitioner, and delicate appliances. Cuts and holds in one operation.

4150-217

Miniature Safety Hold Distal End Cutter

Compact design gives greater range of motion in tight areas. Holds cut wire end to protect soft tissue. Fatigue-free operation.

4150-218

Flush-Cut Safety Hold Distal End Cutter

Superior control when cutting behind 2nd molars. Holds loose wire, cuts "flush" to the distal end of the tube. Spring-rod prevents tissue impingement and maintains greater tension for longer spring life.

4150-221

Long Handle Safety Hold Distal End Cutter

Longer and lighter slim design improves access to distal areas with less applied pressure. Will not fray multi-strand wires.

4150-219

Standard Pin and Ligature Cutter

Ideal for clean, flush cuts on pins and soft wire. Standard size tip and body of pliers offers maximum comfort for large hands.

4150-201

Micro Ligature Cutter

If you have a small hand or like the feel of a small instrument, these pliers are for you. A highly maneuverable compact cutter for tight spaces.

4150-204

Bird Beak Pliers

This versatile instrument is designed for heavier wire. Features hardened inserts on all bending surfaces. Excellent for retainer and clasp bending.

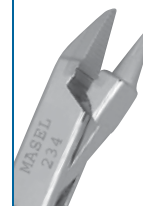

4150-230

Light Wire Bird Beak Pliers with Cutter

These bird beak pliers allow you to bend, shape, and cut without changing tools. Perfect for fabricating omega, helix, or retraction loops.

4150-233

Secure Hold Bird Beak Pliers

Rounded serrations provide maximum grip for bending control. Especially helpful for retainer clasp fabrication.

4150-234

Pin and Ligature Cutter, Small Head

Small cutting head for better mobility and view of operative site. Plus full sized handles for better heft and feel. Tapered tips for easy access into difficult areas.

4150-205

Hard Wire Cutter

Specially designed for cutting hard wire. Slightly larger head size for increased durability, and standard size handles for a non-slip grip.

4150-210

Weingart Pliers

Offset beak provides a convenient working angle. Fully serrated tips hold wire firmly and won't pinch lips. Inserted for extended working life.

4150-287

Jarabak without Cutter

Grooves on both beaks ensure accurate bending and closing with the addition of serration on the flat jaw insert. Ideal for light wires.

4150-214

Jarabak with Cutter

Ideal for precise bending of light wires. A diamond-honed cutter at the base of the beak will cut wires quickly and easily. Grooves ensure accurate bending and closing of loops.

4150-226

DEBONDING AND DEBANDING

Direct Bond Bracket Remover, Angled

Sharp beak wedges under bracket base. Lifts off bracket from tooth surface with no discomfort to patient. Firm grip assures ease in horizontal and vertical use. Works well with metal and plastic brackets.

4150-233

Posterior Band Remover, Long

Band removal is easier and more comfortable. The replaceable 5 mm bushing rests on occlusal of the molar and the arm tip clasps the edge of the band for upward or downward removal.

4150-254

Posterior Band Remover, Short

Band removal is easier and more comfortable. The replaceable 5 mm bushing rests on occlusal of the molar and the arm tip clasps the edge of the band for upward or downward removal.

4150-255
